Click here to download G-Wizard CNC Calculator, a NEW version of G-Wizard Speed and Feed Calculator .Q: Are rollover / trailing edge plugs mandatory on vintage bikes? I've just got a chromed G650 with a GSX750 engine in it. I have found online that the bike is from the early 90's. The manufacturer of the engine in the bike (SOHC) is S&S (now known as SawStop). I am seriously considering buying this bike but I don't want to put money into the engine only to have it die on me! I can't find any stickers in the engine or anywhere

else to indicate that it has a rollover or trailing edge plug (not that I could see anyway). Does this prove that it is a direct drive engine and not a belt drive? If it is a direct drive engine, does that also mean there is no need to fit a rollover/trailing edge plug? I can understand if a direct drive engine was 50 years ago and we used belts, but would that have been the case for bicycles in the early 90's? I know you can change out a belt for a roller chain and that's how I would now do it, but doing it today without learning would be a pain in the butt (and I'm not even a decent mechanic). A: Generally only internal gearbox and belt drive engines need to have the rollover plug fitted. Direct drive require a

steel plug, which is welded into the head via a bolt. The main advantage of roller bearings over a classic self-contained sprocket was that they were lighter, and much preferred for a bike intended to be ridden on a paved road, not a dirt track. It's unlikely that any modern bike would have had a belt drive with a steel plug since there's no real advantage, but then, modern bikes aren't intended to be ridden on a dirt track so maybe this was the case for your 1990's classic. If you want to make a more informed decision about what to do with your bike, you'll need to do a bit more research. buh, the kaiju style defense. I'm just wondering how traditional japs like Yamazaki doesn't get to make

yamakai maps as a custom? 648931e174
